

FACSys® Foundation GENERAL OVERVIEW

What is FACSys® Foundation?

FACSys® Foundation is an evolution of the robust FACSys® 4.91 Fax Messaging Gateway that users have depended on for years. It continues to deliver the outstanding performance you have come to expect with the added benefits of new functionality and increased scalability.

How Different is it from FACSys® 4.9/Enterprise?

FACSys® Foundation is based on the tried and tested FACSys® Enterprise code. A completely transparent migration to the robust SQL Express database is just the start of the list of changes in store for existing FACSys® 4.91 users. No additional database components are required to be installed - the installation wizard takes care of it all. In addition, the same familiar administration tools are used to setup and configure the server.

Take advantage of the free monthly training to get up to speed on the installation and configuration of FACSys® and management of all of the new features. Additional functionality, scalability, management and redundancy features are available in FACSys® Enterprise.

What About Pricing?

There is no change in pricing for product or support from FACSys® 4.91

Upgrade Path from 4.9?

FACSys® Foundation is an in-place upgrade to an existing FACSys® 4.91 installation. Administrators have the choice of allowing the installation to set up its own local SQL Server Express database or select from an already installed instance. All user profiles, routing and archiving settings, metadata and images will be automatically migrated into FACSys® Foundation.
